Industrial Land Supply Baseline 2015

The main objective of this study was to establish an updated baseline position of the supply of industrial land and industrial floorspace in London.

2015 Industrial Land Baseline and Change Analysis

Using the URS / DTZ Industrial Land Baseline 2010 as a base, an updated position with regard to industrial land in London was established.

The process of achieving this was focused around several key tasks, carried out step by step:

- Updating the 2010 industrial land policy designations;
- Undertaking a desk based review and update of industrial land uses, utilising online mapping, Employment Land Reviews (ELRs) and planning permissions data;
- Engaging with boroughs and Mayoral Development Corporations (MDCs), Transport for London (TfL), and GLA departments to verify our desk based update;
- Production of 2015 Industrial Land Baseline; and
- Undertaking a comparison with release benchmarks set out in the Land for Industry and Transport SPG.

Updating the 2010 Industrial Land Policy Designations

This task set out to establish a base map of Strategic Industrial Locations (SIL) and Locally Significant Industrial Sites (LSIS). The latest position with regard to SIL boundaries was provided by the GLA which we reviewed against our own understanding of these developed through completion of ELRs and other spatial planning documents.

Up-to-date mapping of and Local Plan policy allocations for all 33 London boroughs and the City of London were provided to us in GIS format also by the GLA. As many boroughs do not use a nomenclature consistent with the London-wide SIL / LSIS framework, an alignment process was undertaken whereby each Local Plan was studied to determine which designation corresponded to SIL and LSIS, based on an appreciation of the level of protection afforded to these areas in planning policy. This resulted in some ostensibly 'employment' orientated designations, such as 'Mixed-use Employment Locations' in Lewisham and Merton being discounted as LSIS.

The result of this exercise was a London-wide base map of policy allocations, showing the location of SIL and LSIS for all boroughs as relevant.

Desk based review and update of industrial land uses

This task principally entailed a review of recent online aerial and street level photography to determine existing land-uses, particularly with regard to other smaller industrial sites / clusters and scattered areas of industry, using the 2010 Industrial Land Baseline uses as the starting point. Changes were systematically noted on maps which were then digitised in GIS.

In cases where recent ELRs completed by the project team had undertaken such an update of land uses, the GIS datasets associated with these were merged into the base mapping.

As an extra dimension to the task, the London Development Database (LDD) records on started and completed planning permissions / implementations up to the 31st December 2014, provided by the GLA. These were used to pick up sites which had experienced land use change since 2010 including those that had changed use from industrial use to housing and / or redeveloped for non-housing uses above the LDD size threshold (1,000m²) at which these permissions are registered. This also ensured that where ELR based changes had been applied for particular boroughs that any more recent changes were picked up and incorporated in the update.

Engagement with Boroughs / MDCs, TfL and GLA departments

Mapping was produced following the finalisation of the desk based review of land use, which reflected the draft updated land use and policy position for each borough. These maps were issued to the boroughs / MDCs for them to verify that the updated position was correct to the best of their knowledge and advise of any corrections or forthcoming changes, with instructions on updating the mapping also provided.

The mapping was also issued to TfL and the GLA waste department for their review and verification against their own information sources, with regard to land for transport and waste management and recycling facilities respectively.

Production of 2015 Industrial Land Baseline

The boroughs and other stakeholders provided their responses, in GIS format in some cases, with any resulting changes then processed and digitised where required. Once all updates were processed, mapping and schedules of land use were produced for all boroughs, sub-regions, inner and outer London and for London as a whole, representing the 2015 Industrial Land Baseline.

Comparison with Land for Industry and Transport SPG Release targets

Using the updated dataset on land uses prepared as a result of the above tasks, the absolute and percentage change in the supply of industrial land

since 2010 and previous study time periods, i.e. 2001 and 2006 was calculated.

Once calculated, analysis comparing the SPG target rate of industrial land release and the actual rate of release was undertaken to identify trends, to inform reporting.

Industrial Land Release Pipeline

Supplementing the process undertaken to determine the 2015 Industrial Land Baseline for London, the amount of industrial land in the 'pipeline' for future release was also quantified, primarily through interpretation of several sources of information which allow identification of industrial land that may be redeveloped for non-industrial uses. Proposed or anticipated industrial land release arising from various information sources utilised have been categorised as follows, broadly in order of the degree of certainty at which the release is likely to occur:

- Unimplemented Planning Permissions (not started) sourced from the London Development Database as at 31st December 2014;
- Opportunity Area Planning Frameworks (draft or adopted);
- Emerging (not yet adopted) Local Plan policy proposals, including proposed changes in industrial site allocations (SILs / LSISs), Area Action Plans and SPDs, separated out into:
 - Regulation 19-21 proposals;
 - Regulation 18 proposals.
- Housing Zones (including specific Housing Sites) as defined by the boroughs / GLA.

Information and data pertinent to the categories listed above were primarily sourced directly from the GLA with the exception of emerging Local Plan policy proposals which boroughs were requested to provide as part of the verification process. Boroughs were also requested, as part of the latter process, to verify mapping provided to them of the Opportunity Area Planning Framework¹ and Housing Zones boundaries, in case their understanding of these differed from the GLA.

The approach took care not to 'double count' land for potential release where it could fall under more than one of the categories outlined above. To exemplify, the cumulative quantum of release associated with Opportunity Areas (OAs), Local Plan policy proposals and Housing Zones (HZ) included only land which is not subject to unimplemented planning permission, to avoid such sites being 'double counted' in the analysis. Similarly where a boundary of an OA, Local Plan proposal or HZ overlaps, land subject to release within that area has only been quantified against one category, typically that which has the greater certainty of causing the land to be released / redeveloped for other uses.

Identifying Industrial Land in the Wider South East

The supply of industrial land was calculated by using an average industrial floorspace to land ratio

of 0.45 to 1 to convert Valuation Office Agency (VOA) industrial business floorspace statistics from 2000 -2012 into land area^{2,3}. The VOA statistics are divided by local authority area, so estimates were made for how much of each local authority's industrial land stock was within a market or corridor, if the local authority was not wholly win one already or not at all.

Market Data: Rental Values, Land Values and Floorspace Availability

Cushman & Wakefield collected data for each borough in Greater London for the period May-June 2015, for rental values, land values, floorspace and industrial premises marketed. EGi was a key data source for capturing this information. EGi provides one of the most comprehensive and up-to-date sources of information on the industrial market for the purpose of this task. EGi does not capture all floorspace (and rents) and land availability (and prices) as it only captures properties where agents provide details and not all deals are reported due to confidentiality. EGi data was complemented with other market data, including PROMIS, Colliers International datasets, data provided by Lambert Smith Hampton, London Datastore (based on GLA calculations of Land Registry. DTZ's quarterly UK Industrial Property Market Report and was also used to benchmark trends in industrial rentals, floorspace uptake and availability. To test the industrial rental and land value data captured, we undertook discussions with DTZ's Industrial and Logistics team and local agents across Greater London (particularly in terms of land values where there is very limited information available on EGi).

In addition to sub-region and borough level reporting, data was reported for the property market areas of: Central Services Circle, Lea Valley, Park Royal / A40 / Heathrow, Thames Gateway and Wandle Valley.

Industrial Businesses Churn Analysis

Churn was calculated using ONS' Business Demographics (2013) dataset. A custom version of this dataset was requested and received from ONS to identify enterprises by two digit SIC codes at a local authority level for the following data: births; deaths; active enterprises; the survival rate of new firms each year; and survival of firms born in 2008.

The statistics were used to calculate two outputs: the number of enterprises that were active each year; and the number of enterprises that were active prior to 2008 and still active in the years afterwards. The outputs for each borough were added to get overall results for the sub-regions and property market areas⁴.

¹ Boundaries mapped in this process represented key areas of industrial land release within Opportunity Areas rather than each of the Opportunity Areas in their entirety.

² The latest VOA business floorspace statistics available are for 2012.

³ Office of the Deputy Prime Minister (2004); ELR Guidance, p. 101

⁴ As Newham is part of both the Lea Valley and Thames Gateway statistical values for the borough have been split equally between the two property market areas.

Industrial Land Supply Baseline: Limitations to Assessment

Review of Non-designated Sites under One hectare

This study has identified an accurate baseline of industrial land supply in London in 2015 by undertaking a thorough review of all areas of industrial land regardless of size.

It was observed during the desk based review that a number of small non-designated industrial areas may have been redeveloped to non-industrial uses prior to the last reporting period, i.e. 2010-2015. Such instances were identified as being more common in Inner London boroughs where supply of industrial land is relatively low, compared with Outer London, and more typically found in small non-designated sites.

The 2010 Industrial Land Baseline study scope was limited to reviewing land uses on designated industrial land (SIL / LSIS) and non-designated areas greater than one hectare. The uses on small non-designated sites were for the most part not checked or updated in 2010.

It is therefore the case that for a small number of incidences some smaller non-designated sites identified in this study as being redeveloped to non-industrial since 2010 could have experienced this change prior to 2010. It has not been possible for this study to identify the exact timeframe that such sites were redeveloped and as such no adjustment has been made for this, with the exception of Islington where additional information was provided by the Council as part of the borough engagement phase.
