

Waterscan Ltd comments

Page: [Draft New London Plan](#)

Section: [N/A](#)

Whilst the draft makes good references to increased uptake of water re-use, i feel there is a small section missing, highlighting the potential impact of water scarcity, this should be looked at in the same risk manner as flooding, with encouragement for localised water re-use/recycling, intelligent water storage and use.

it was disappointing to see the omission of greywater recycling as a means of mitigating water scarcity and improving a buildings overall water consumption profile and therefore meeting/exceeding the target 105 l/p/d water use target. given the commercial availability of these systems, the voluntary uptake and the usually acceptable return on investments, it would be good to see the london plan actively encourage this kind of technology, rather than rely on interpretation. this often results in low flow fixtures and fittings, which are easily reversed post occupancy.
