

Q27 Table 8.1 on page 190 indicates a housing supply of 11,000 in years 0-10 and 9,100 in years 11 to 20, totalling 20,100 for the 20- year period of the plan which is consistent with statements elsewhere in the plan. Table 3.1 lists allocations which sum to 9,134 for the first ten years. Cargiant is expected to produce 5,300 dwellings over 20 years, so it is reasonable to expect a contribution of 1,866 during the first ten years to reach the number anticipated in Table 8.1. But the allocations in table 3.1 for the second ten year period only sum to 3,900 which, with the residue of Cargiant sums to 18,334 for the twenty year period. Where is the supply of the remaining 1,766 to come from?

Q28 Table 11.1 provides a narrative of the phasing of the development of the places within OPDC which makes clear their dependence on the delivery of a number of infrastructure provisions. Where will I find a GANTT chart or equivalent which sets out the chronological relationship between the delivery of infrastructure elements and the delivery of numbers of homes and jobs?
