Report published

# Findings - Publishers

Not a lot of worries about the data store itself - most challenges stem from ways of working and basic data management issues.

But... issues with paperwork, strategic support, skills

Demand for standards, processes and guidelines - a clear steer to aid consistency is key.

# Findings - LOTI

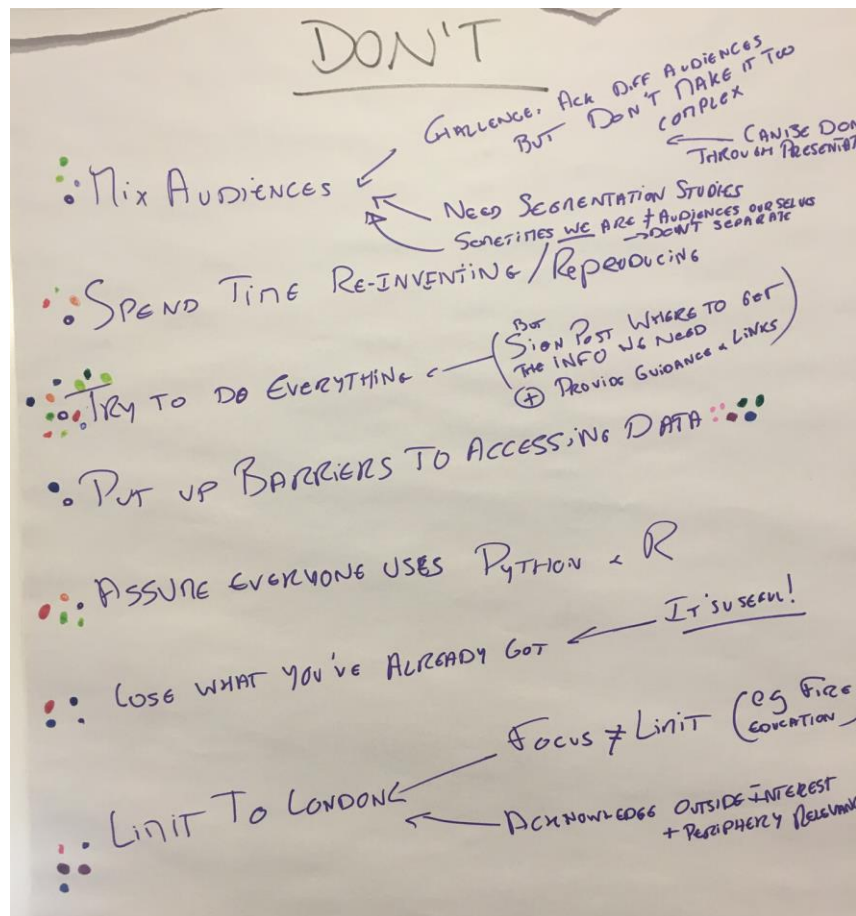

Mostly statutory publishing

Issue is rarely a lack of platform, but of shared skills, standards, processes

Cooperation / Federation + central function for skills and standards

# Findings - Consumers

Improve consistency and compatibility.

Improve the search function and findability of data published and shared is key.

Recognise that many operational boundaries for public services (eg fire brigade/ police) extend outside of the political boundaries of the GLA.
