

London Risk Register

Version 11

February 2022

London Resilience Partnership Risk Register

Version 11 (February 2022) of the London Risk Register is collectively owned by the Category 1 and 2 Responders (as defined by Schedule 1 to the Civil Contingencies Act 2004) within the London Resilience Forum area.

To provide feedback on the content, format or accessibility of the London Risk Register, please email caitlin.james@london-fire.gov.uk.

1. Introduction and Background

1.1 Introduction

Risk assessment underpins the work of the [London Resilience Forum](#). Assessments within the London Risk Register drive the development of multi-agency capabilities to prevent, mitigate, respond to, and recover from incidents.

Publication of the London Risk Register is designed to assist Local Authorities and businesses develop their own emergency and business continuity arrangements.

Planning is based on 'reasonable worst-case scenarios' informed by historical and scientific data, modelling, and professional expert judgement of both the likelihood and impact of a risk. The inclusion of a risk does not mean it is expected to happen, nor that the impact would be as serious as the description provided.

Each risk is scored for impact and likelihood. Likelihood is expressed as the "annual likelihood of each RWCS occurring, with the assessment valid for two years". Impacts are rated between "Limited" (1) and "Catastrophic" (5). The likelihood and impact scores are combined to give an overall risk rating.

The London Risk Register is designed to provide a summary of the main risks affecting Greater London. The UK [National Risk Register](#) (2020) provides a similar outline of risk for the UK as a whole. Further risk assessments are conducted within each London Borough, providing additional information on locally specific risks and response arrangements.

1.2 Risk assessment methodology

This version of the London risk register uses the same methodology as the previous version, published in 2021 using the national risk assessment methodology introduced in the 2019 National Security Risk Assessment (NSRA, available on Resilience Direct). This version assesses threats and non-malicious risks under the same methodology, using the same likelihood and impact scales. To accommodate the new threats and risks in this manner, some changes were made to the risk assessment methodology.

For more detail on the risk assessment methodology see [appendix 1](#).

1.3 Understanding the Risk Register

Risks are grouped by theme and presented in order of overall rating within that theme, with the highest risks first. Themes are based on common features and consequences, which makes it easier to understand the risk in context and to consider which risks might influence, or be influenced by, others. Risk themes are accidents and system failures, human and animal disease, societal risks, natural hazards, cyber-attacks, and terrorist threats.

OFFICIAL

The headings used on the London Risk Register are as follows:

Risk ID Rating	Sub-category Lead	Outcome Description	Likelihood	Impact	Controls in Place	Last Review Next Review	Change Since last publication
-------------------	----------------------	---------------------	------------	--------	-------------------	----------------------------	----------------------------------

Risk ID: Unique reference number for each risk. R denotes risk is also a national risk.

Rating: Overall risk rating based on likelihood and impact.

Sub-category: in some cases risks are sub-categorised for ease of comparison with similar risks.

Lead: The organisation responsible for the assessment of the risk in London.

Outcome Description: A summary of the reasonable worst case scenario used to inform the assessment.

Likelihood: Assessed from 1-5 where 1 is the least likely and 5 more likely. (A table with probabilities associated with each score is available at the end of this document.)

Impact: Assessed from 1-5 where 1 is the lowest impact and 5 more impactful.

Controls in place: Plans and procedures in place to mitigate this risk

Last review / next review: Dates of the last review of that risk, and planned date for the next review.

Changes since last publication: Summary of changes to the risks since the last assessment.

1.4 Risk Review Schedule

All risks with an overall rating of “Very high” and “High” will be reviewed yearly, other risks will be reviewed every two years; review dates are in the right hand column of the register ([section 3](#)).

New risks will be reviewed the year after they are introduced to capture any new learning and will thereafter be reviewed yearly or every two years, as appropriate.

1.5 Controls

Controls specific to the type of incident referred to are listed in the register below. In addition, there are many generic plans, procedures and principles that aid multi-agency working in incident response and national initiatives that are used to aid responders in complex situations. These include:

- [London Emergency Services Liaison Panel](#) (LES LP)
- [Joint Emergency Services Interoperability Principles](#) (JESIP)
- Pan-London emergency response plans and frameworks available on london.gov.uk covering generic response procedures, consequence based planning for use in various incidents, and incident-specific plans.

2. New risks, removed risks and risks under review

Several risks introduced in the 2019 NSRA were raised to the attention of the London Fire Brigade (LFB) to lead on. The introduction of these risks prompted an in-depth review of LFB-led risks including detailed consideration of the national risks and whether these adequately cover London’s risk profile.

R54 Major Fire was a new risk on the London Risk Register in 2021, the London assessment for this was closely based on the national risk. It was decided that the description of the Reasonable Worst-Case Scenario of this risk was too broad, covering multiple settings which have different risk profiles in London, requiring different responses and therefore different risk assessments.

The London Risk Advisory Group have created four new risks which cover some of the separate

OFFICIAL

scenarios described in R54 in more detail. R54 will remain on the London Risk Register for now, to reflect the risk as seen at a national level. New fire risks in London Risk Register version 11 are:

- L54a Fires in purpose built high-risk flats
- L54b Fires in large public and commercial buildings
- L54c Fires involving landfill and waste processing sites
- L54e Major fire in care homes and hospitals

'HL33 Wildfires' has been renamed 'L54d Wildfires in proximity to urban areas' to maintain numbering consistency with other fire risks.

Aviation risks have been re-structured and renamed to cover a wider range of scenarios possible in the vicinity to London's airports than previously captured. The national risk 'R71 Aviation Crash' remains on the LRR, with HL9 Aviation Crash reintroduced as L71a Large aircraft incident in proximity to airport and HL9b

A review of radiological risks found that the national risk 'R66 Radiation release from overseas nuclear accident' was too specific in the description of its RWCS and too large in scope to cover impacts and response actions from domestic radiation risks. A new risk has been introduced to cover local risks to London of the mishandling of radiological risks while in transport or in use:

- L66 Radioactive incident caused by mishandling of radioactive material

Two radiological risks are currently under review:

- R65 Civil Nuclear Accident currently under review as to whether it should be included on the LRR in addition to R66
- R66 Radiation release from overseas nuclear accident appears on the London Risk Register using the national summary assessment and is currently under review alongside R65.

The LFB's risk review also found cause to remove the following risks:

- HL25 Fire or explosion at a flammable gas terminal
- HL7 Industrial explosions and major fires

The RWCS for these are covered under three national risks; two of which were added to the LRR last year (R55 and R57) and also under R61 Fire and explosion at an onshore fuel pipeline which has been included this year to cover industrial fires and explosion scenarios.

There are several risks on the NSRA and the National Risk Register that are not assessed as part of the London Risk Assessment Process and therefore do not appear on the London Risk Register. Some are out of scope of the London Risk Assessment, some are based on scenarios that are not applicable to London (e.g. the RWCS refers to infrastructure that does not exist in London), some risks are not considered by LRFs as the response would be wholly owned by central government.

LONDON RESILIENCE

3. London Risk Register: High-Level Summary Risk Matrix

Impact	5		R84 Severe Drought	R76 National Electricity Transmission, R95 Influenza-type Pandemic, T7 larger Scale CBRN Attacks			
	4	R71 Aviation Crash, R55 Fire or Explosion at a fuel distribution site, R57 Explosion at a high-pressure gas pipeline, R74 Reservoir/Dam Collapse, R66 Radiation Release from overseas	R77 Gas Supply Infrastructure, R68 High Consequence Dangerous Goods, L54b Fires in large public and commercial buildings	R83 Surface Water Flooding, R92 Severe Space Weather, L21 Fluvial Flooding			
	3	HL23 Bridge Collapse, HL34 Evacuation of passenger ship, HL22 Building Collapse, R75 Water Supply Infrastructure, R64 Large Toxic Chemical Release, R61 Fire and Explosion at an onshore fuel pipeline, L66 Incident caused by mishandling of radioactive material	R69 Food Supply Contamination, R80 Systemic Financial Crisis, L64 Localised industrial accident involving small toxic release, HL105 Complex Built Environments	R91 Low temperatures and heavy Snow, R96 Growth of Anti-Microbial resistance, R97 Emerging Infectious Disease, R85 Poor Air Quality, L19 Groundwater Flooding, HL19 Coastal/Tidal Flooding	R90 Heatwave, R87 Volcanic Eruption, R54 Major Fire, R63 Accidental Release of a Biological Substance, L54a Fires in purpose built high-rise flats, T2 Attacks on Infrastructure, T3 Attacks on Transport, T6 Medium Scale CBRN Attacks	R104 Public Disorder	
	2	R67 Maritime Pollution, R62 Accidental Release of Biological Pathogen, R103 Insolvency affecting fuel supply	R78 Disruption to telecoms systems, R98 Animal Disease, R102 Industrial Action (fuel), HL10 Local Accident on Motorways/ Major Trunk Roads, R99 Industrial Action (firefighters),	L54d Wildfires, L54e Major fire in care homes and hospitals, R93 Storms and Gales, HL11 Railway Accident, HL21 Land Movement, R101 Industrial action public transport, L71b Small Aircraft Incident	R105 Influx of British Nationals, R72 Collapse of major government contractor, R73 Major Social care Provider, R79 Technological failure at a retail bank, R100 Industrial action (prison officers), T4 Cyber Attacks T5 Smaller Scale CBRN Attacks	L54c Fires involving landfill and waste processing sites, T1 Attacks on Publically Accessible Locations

4.3 Societal Risks

Risk ID Rating	Sub-category Lead	Outcome Description	Likelihood	Impact	Controls in place	Last Review Next review
R105 MEDIUM	Humanitarian Local Authorities	Influx of British Nationals Influx of destitute/vulnerable British Nationals who are not normally resident in the UK and cannot be accommodated by family/friends. Up to 10,000 BNs not normally resident in the UK returning to the UK within roughly a month following conventional war, widespread civil unrest, or sustained terrorism campaign against British and other Western nationals. Around 2% of returnees require statutory support including housing, health services and access to welfare.	4	2	Local authority: Standard social care and emergency housing arrangements. Existing mutual aid agreements in place across London. Heathrow Travel Care – a team of social workers. Other organisations: Full time officer located at Heathrow (alongside Heathrow TravelCare) to consider the issue of repatriation at ports. Position funded by the Foreign & Commonwealth Office. Red Cross and FCO agreement on repatriation; Meet & greet returning passengers at airport, arrange onward transport, supported by the FCO	Nov 2020 Sept 2022
R102 MEDIUM	Industrial Action Local Authorities	Industrial action (fuel supply) Actual or threatened significant disruption to the distribution of fuel by road due to any cause, including industrial action by fuel tanker drivers. Retail filling stations, depending on the extent of the disruption and their locations and assuming no panic-buying, would likely run out of fuel within 4-5 days.	2	2	Legal requirements re: conduct of industrial disputes. Stocks of contingency fuel to varying degrees National Emergency Plan for Fuel	Sept 2021 Sept 2023

OFFICIAL

Risk ID Rating	Sub-category Lead	Outcome Description	Likelihood	Impact	Controls in place	Last Review Next review
R101 MEDIUM	Industrial Action TfL	Industrial action (public transport) Strike action by key rail or London Underground staff (e.g. signallers) resulting in the total shutdown of very significant amounts of the national rail network or about ¾ of the London Underground network. In both cases severe disruption could last for a week as part of a three-month campaign.	3	2	Health and Safety at Work Act 1974. Employment Act 1980. Employment Act 1988. Public Order Act 1986. Trade Union and Labour Relations (Consolidation) Act 1992. Anti-Social Behaviour Act 2003. Organisational Business Continuity Arrangements	Sept 2021 Sept 2023
R99 MEDIUM	Industrial Action LFB	Industrial action (firefighters) A national fire strike in England for a continuous eight-day period with loss of life directly attributable to a weakened response by individual fire and rescue services, and reputational impact on government.	2	2	Police Act (1996) RCN Code on Industrial Action Alternative emergency cover protocols for the Fire Brigade Organisational Business Continuity Arrangements Recall to active duty	Sept 2021 Sept 2023
R100 MEDIUM	Industrial Action MoJ	Industrial action (Prison officers) Industrial action by operational prison staff, leading to a shortfall of staff available for duty for more than 24 hours.	4	2	Criminal Justice and Public Order Act (1994)	Sept 2019 Sept 2022
R80 MEDIUM	Failure of governance Business Sector Panel	Systemic Financial Crisis A severe economic downturn and/or crisis of confidence precipitates the failure of one or more UK banks. This would have a major negative impact on the GDP (Gross Domestic Product) by reducing bank lending, consumption and broader investment. Such a crisis would likely lead to a recession and accompanying pressure on living standards.	2	3	PRA, FCA and FPC regulatory bodies Financial Services and markets Act 2000	Nov 2020 Sept 2022

OFFICIAL

Risk ID Rating	Outcome Description	Likelihood	Impact	Controls in Place
<p>T7 VERY HIGH</p>	<p>Larger Scale CBRN Attacks</p> <p>See T5 outcome description</p> <p>A larger-scale CBRN attack has never happened in the UK, but would be more challenging to respond to than other malicious attacks, due to the potential health impacts and widespread environmental contamination. CBRN events can also present responders and those affected with significant levels of uncertainty about what has happened, and the scientific evidence may evolve as the incident unfolds. This leads to widespread psychological impacts including anxiety.</p>	<p align="center">3</p>	<p align="center">5</p>	<p>See T5 Controls in place</p>

Appendix 1 - The 6 Stage Risk Assessment Process

Contextualisation

A range of factors influence the assessment of both likelihood and impact of risks. Demographics, transportation and environmental factors all exert an influence on how a risk would manifest in a particular area. Each of the 33 Borough Resilience Forums in London uses this local context to develop their own risk assessments.

Hazard Identification and allocation for assessment

London Risk Advisory Group identifies the threats and hazards that, in their view, could give rise to an emergency within London in the next 2 years.

Lead risk assessors agreed by the group then undertake to assess the likelihood of each risk occurring, and to make a judgement of how impactful the RWCS of that risk would be. Risks included in the London Risk Register are subject to a scheduled review programme to ensure that each risk is revisited and updated periodically.

Risk analysis

Drawing on guidance from Government, other research and local knowledge, lead assessors consider the likelihood of the risk over the next five-year period. Individual Risk Assessments are then provided to the London Risk Advisory Group for discussion and approval.

Risk evaluation

Individual Risk Assessments are confirmed and summary information collated into the London Risk Register.

Risk treatment

Gaps in capability against the reasonable worst-case scenarios is assessed periodically by the London Resilience Forum, where additional risk management options are agreed as necessary.

Monitoring and Review

Risk assessment is not a static process and is subject to constant review. At a minimum, each Individual Risk Assessment is formally reviewed on a 2-year cycle. An annual update of the London Risk Register is published in the spring.

OFFICIAL

Appendix 2 – Likelihood and Impact Scoring Scales

Further detail on the scoring measures is provided in Annex 4D of “Emergency Preparedness” (HM Government, 2005) or Local Risk Management Guidance (available via Resilience Direct).

Likelihood scale

Score	Likelihood Descriptor	Probability of the Reasonable Worst-Case Scenario occurring within a 12-month period
1	Low	Less than 0.2% chance of occurring per year
2	Medium Low	Between 0.2% and 1%
3	Medium	Between 1% and 5%
4	Medium High	Between 5% and 25%
5	High	More than 25%

Impacts Categories

Each impact category is split into several “indicators” which are scored out of five. Indicator scores are amalgamated to reach a score for that category, and the category scores are amalgamated to reach an overall impact score.

Impact Category	Explanation
Human Welfare	Includes numbers of fatalities and casualties resulting from the RWCS, needs for mass evacuation, and short- and long-term accommodation.
Behavioural Impacts	Psychological impacts of the risk, including how people’s perception and behaviour might change because of the risk.
Economic	An approximate net economic cost, including both direct (e.g. loss of goods, buildings, infrastructure) and indirect (e.g. loss of business, increased demand for public services) costs.
Essential Services	How the RWCS might impact the emergency services, critical infrastructure, transport, education and other service and infrastructure providers
Environment	Encompassing long-term impact of contamination or pollution of land, water or air with harmful biological / chemical / radioactive matter or oil, flooding, or disruption or destruction of plant or animal life.
Security	Includes impacts to law enforcement and intelligence services, and disruptions to criminal justice and border security.

Appendix 3 – Overall Risk Rating Definitions

Definitions of Nationally Approved Risk Ratings	
Very High (VH)	These are classed as primary or critical risks requiring immediate attention. They may have a high or medium likelihood of occurrence, but their potential consequences are such that they must be treated as a high priority. This may mean that strategies should be developed to reduce or eliminate the risks, but also that mitigation in the form of (multi-agency) planning, exercising and training for these hazards should be put in place and the risk monitored on a regular frequency. Consideration should be given to planning being specific to the risk rather than generic.
High (H)	These risks are classed as significant. They may have a high or low likelihood of occurrence, but their potential consequences are sufficiently serious to warrant appropriate consideration after those risks classed as 'very high'. Consideration should be given to the development of strategies to reduce or eliminate the risks, but also that mitigation in the form of at least (multi-agency) generic planning, exercising and training should be put in place and monitored on a regular frequency.
Medium (M)	These risks are less significant but may cause upset and inconvenience in the short term. These risks should be monitored to ensure that they are being appropriately managed, and consideration given to their being managed under generic emergency planning arrangements.
Low (L)	These risks are both unlikely to occur and not significant in their impact. They should be managed using normal or generic planning arrangements and require minimal monitoring and control unless subsequent risk assessments show a substantial change, prompting a move to another risk category.
<i>Based on the model risk rating matrix published in Annex 4F of "Emergency Preparedness" (HM Government, 2005)</i>
